---

Mary,

I have never personally talked to Professor Bea. All correspondence between professor Bea and me has been only via e-mail and interaction between us has been inquisitive in nature and very respectful.

Here is the initial e-mail to Professor Bea asking if he had seen the SPPHU flyer and if he endorsed it and the information contained within. When I received the flyer from a SP Neighborhood Council, it was obvious it was a cut and paste job with Professor Bea's picture inlaid on to the Cornerstone blast radius. I was quite certain a person of Professor Bea's stature would not endorse the information given that to my knowledge he lacks the quantitative data to support the allegations.

Finally, I never stated to Professor Bea that the EPA approved Rancho's QRA...that would be a false statement and I don't play that game. Bottom line, the Rancho issue is about facts and compliance with the applicable regulations/laws, not baseless rhetoric.

Ron

Professor Bea,

I have just received the attached flyer has been distributed by Janet Gunter and other members of the San Pedro Peninsula Homeowners United. Do you endorse this flyer and the information contained in the flyer? As the Western District Manager for the Rancho LPG Facility in San Pedro, CA, we have concerns about the validity of much of this information.

Regards,  
Ron Conrow
